

Boom Lift License Scottsdale

Boom Lift License Scottsdale - To operate an aerial boom lift, operators should be licensed through training that can be obtained using both classroom sessions and practical training and by attaining a boom lift license. Instruction must be given with respect to the type of aerial lift that will be utilized on the job. A License is required for any person who works on or operates an aerial boom lift.

Vehicle-mounted aerial devices include the following work vehicles: aerial ladders, extensible boom platforms, articulating boom platforms, vertical towers, and any combination of these types.

There are some basic safety regulations that apply to all boom lifts. Worker safety whilst in the basket is a top priority. Workers should have on a body harness and lanyard attached to the basket or boom. Never tie off to an equipment, an adjacent pole or a structure. Employees must stand on the basket floor, and never climb or sit on the edge of the basket. The manufacturer's load restrictions should be followed.

Aerial lift operators must be authorized to utilize the equipment. The operator should be familiar with all the aspects of the device and should have access to the manufacturers manual that should be kept within the lift. Operators are responsible for making certain that safety procedures are followed in operating the lift. A daily test of lift controls should be done. Position outriggers and set brakes (if they are utilized) on a stable surface or on pads. If working on a slope, make use of wheel chocks.

Never move an aerial lift truck with an elevated boom while workers are in the basket. Extensible boom platforms and articulating boom utilized as employees carriers must have plainly marked, accessible, upper controls. Except in emergency situations, lower controls must not be utilized to override upper controls unless the individual inside the lift gives permission.

Do not wear tree or pole climbers shall while working from an aerial lift.

The insulated part of the aerial lift must not be altered.

Make sure that the booms are carefully checked, that the equipment is correctly cradled and the outriggers are in the stowed position before moving.

Make sure that lifts being utilized in or near power lines are di-electrically tested and follow local regulations.
